

It is tiny.
It lives in Antarctica.
It is one of the most
abundant animals in
the world.

Guess ~~me~~ what it is.

Here are the Antarctic krill.

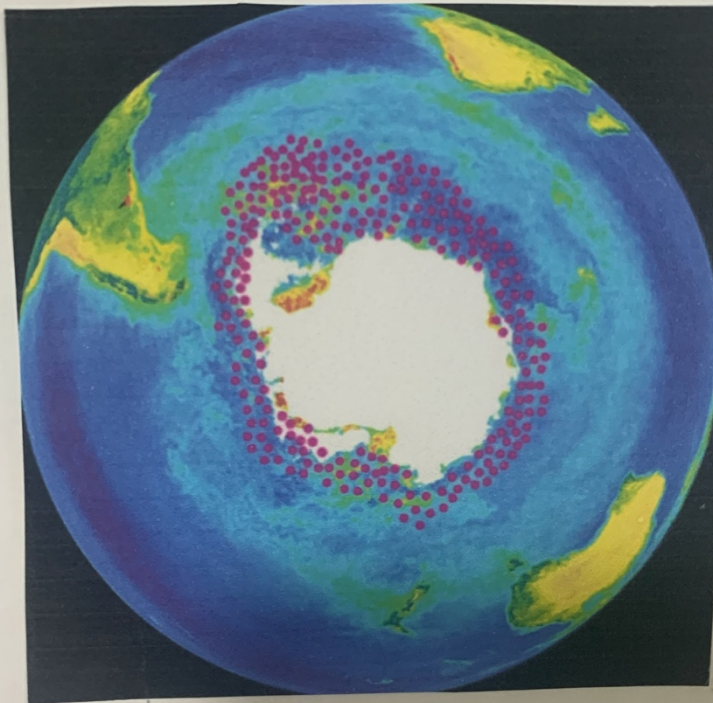

This is the Antarctic krill's body.
They are very tiny.
They are cute.

How big are they?

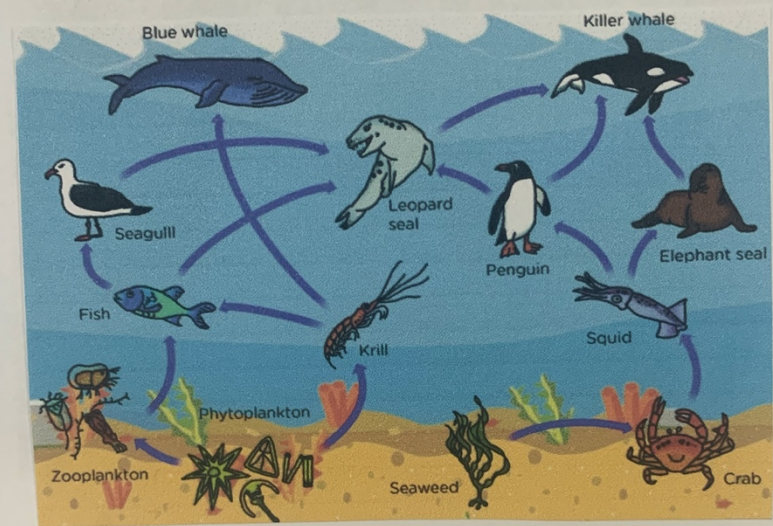

They are around 1cm in
~~length~~ length and weigh around
2g.

Where do they live?

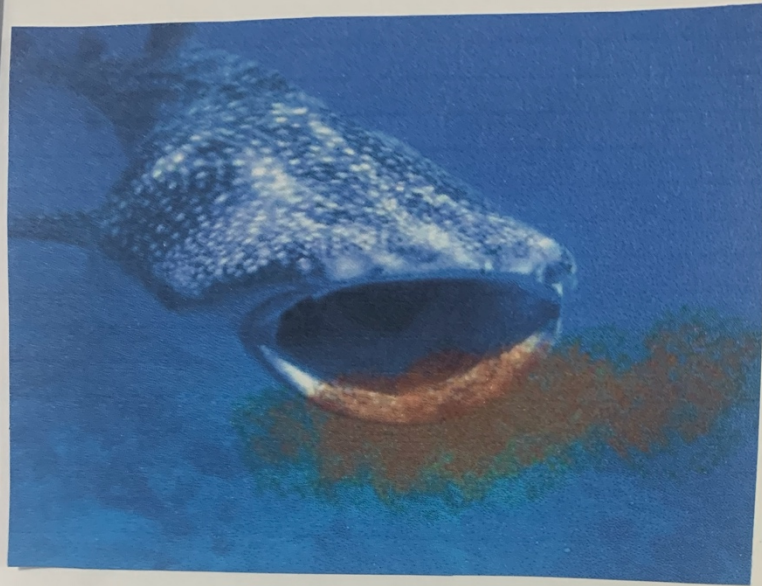

They live in the Southern Ocean.

They are found all around around Antarctica.

Krill are tiny, but they are very important in the food chain.

Look! A whale shark is
eating the krill.
