1. About the book

Have you ever looked at computer-generated images (CGI) and wondered how they are made?

Jon Stuart is an artist and he explains how he works.

2. Interesting parts

1. When I 'm happy with my model ,
I give it a texture.

I can wrap different textures around
my model.

2. I make shells, rocks and plants
for the background in the same way
that I make my characters.

Everything begins with a simple
shape.

3.Summarize

- *This book tells that how can we make the CGI characters.*
- *First, we start with a block of cubes. Next, we add more cubes. Then, we add shapes to make the model smooth. And we can add a texture and set the model to the right size. After that, we can add blocks inside as bones. At last, we'll add a background. Finally, we can add lighting.*

The background is a vibrant, stylized illustration of an ocean scene. It features large, flowing waves in various shades of blue and green, with white foam at the crests. Two dolphins are depicted: one in the lower left foreground, swimming towards the right, and another smaller one further back on the left. The sky is a light blue with soft, white clouds and small white dots representing bubbles or distant stars. The overall style is clean and modern, with a focus on fluid, organic shapes.

Thanks !
