the way to visit

The Triplets Park

A lot of animals

In summer holiday, I went to Chimelong Safari Park with my family on a sunshine day.

Look, I have a binoculars to see wild animals better.

There is a map of the park, we has most of information from it. We can know what is the best visiting route and where is the location.

You also can get the correct timetable of the animals show and operation time of each site from the right picture.

“

One of the interesting way to visit the park is taking the little sightseeing train. A close visit to see animal is so funny.

There are many ostriches which is called “the Reporter of animal”. Because they are running on field everywhere.

There is a giraffe eating the grass. It is the tallest animal of the world.

 the way to visit

”

“

Another interesting way to visit the park is taking the cable car.

The cable car has three station, the Swan Lake Station, the Savanna Station, and the Triplets Park Station.

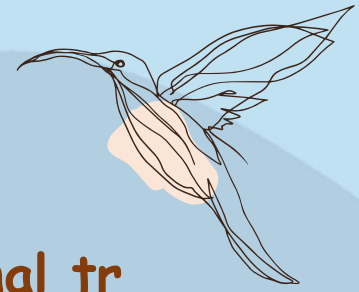

When I sit in the cable car, birds flew close to me, animal walked or jumped under my feet. How amazing !

”

The Triplets Park

The giant panda is known as a national treasure of China.

There was a world wonder created by Chimelong — Giant Panda Triplets who were born on July 29 in 2014.

The elder sister is Mengmeng, the second brother is Shuaishuai, and the youngest brother is Kuku.

Because of growing up, they lived apart each other.

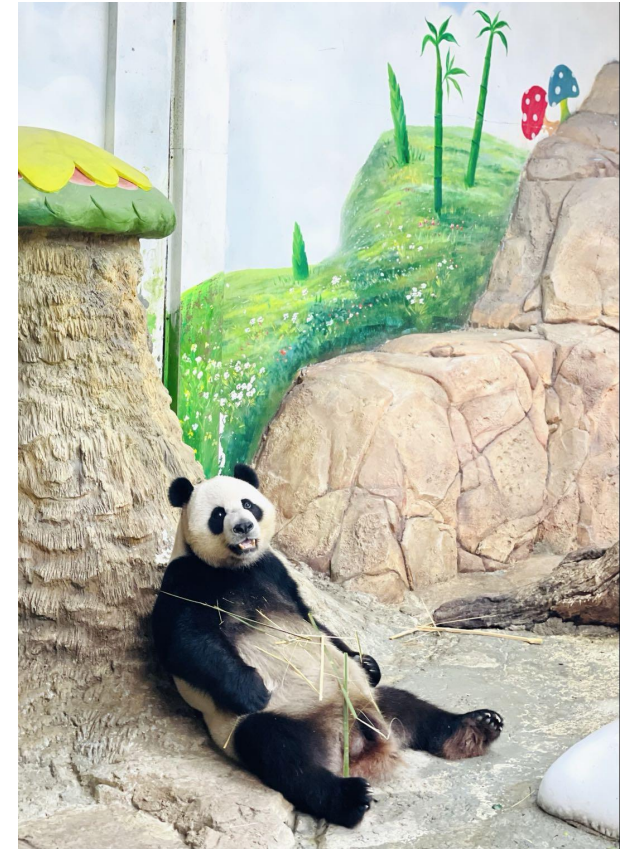

The Triplets Park

They like lying on the ice, climbing the tree and playing toys.

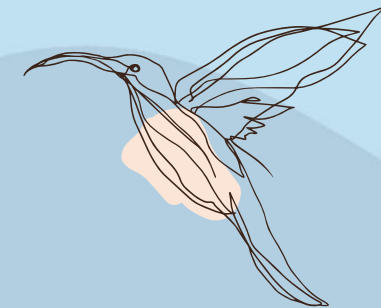

Their main food is bamboo. They also like eating grass, tree roots and honey. Sometimes a little meat.

They sleep over 10 hours every day.

A lot of animals

Following the map, I also saw many kinds of animals.
Let me show you. I believe you will love this wonderful place.

A lot of animals

Black Swans look elegant, and they were white when they were kid.

They have the longest neck in all kinds of the swans. Their thin and long neck look like the letter S.

Macaw, a large tropical American parrot, is having a long tail and brilliant feather.

African stork is a large black and white bird with a long beak and neck and long legs.

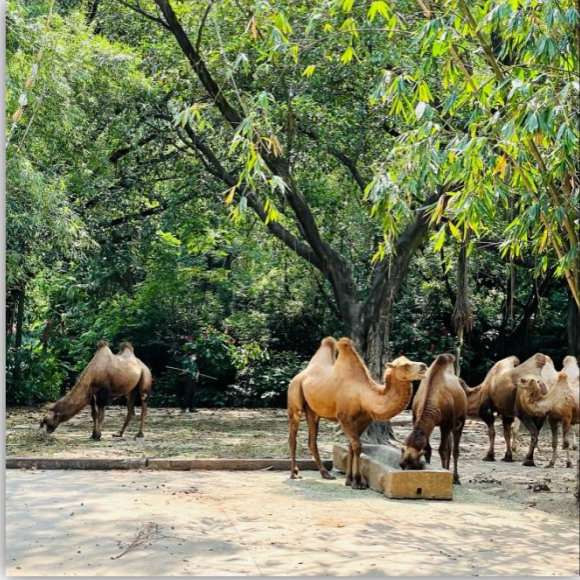

A great hornbill is a South American bird.

It has a big and hard beak.

A lot of animals

The camel has two species, one is only a hump, another is two.

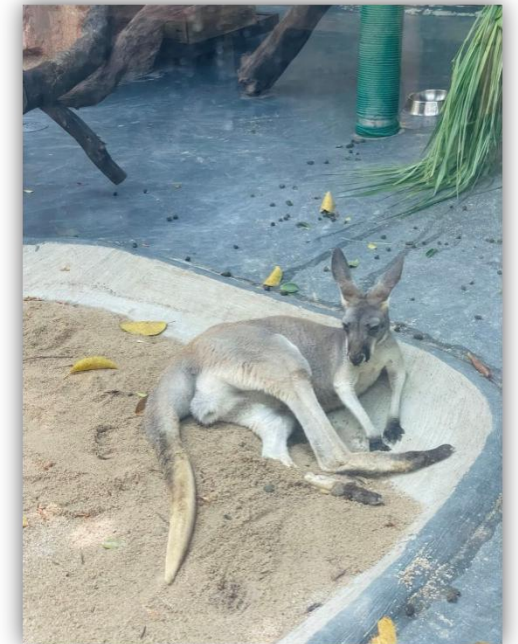

This is black spider monkey. It like climbing up and down. His tail is so fiexible that is called "the fifth hand".

The golden tiger has brown stripes. Its head tail and body is covered with golden which are the most precious species.

The eastern Grey Kangaroo baby is lying on the sand to have a rest.

Thank You !
